

TUÑACAO FAMILY TREE

Ver 1 – 29Apr2011
of Cebu

which includes members from other clans such as:

- Rotea
- Arong
- Rodriguez
- etc

INTRODUCTION:

This is one of the standard print-outs of the Family Tree Maker Genealogical Software.

The print-out is generated from data we encoded into the Database from the Excel files of Noli Arong which he graciously gave to compliment the Rotea family tree that we were expanding. These were merged with information in the Database gathered over the years from various sources.

The Database is a project to trace the inter-relational linkages between major families in the Tanjay area, by bloodline and marriage.

Where exact birth years were unknown, approximated dates were added based on “guestimates” and interpolation.

The format of the print-out is as follows:

1. Arabic numeral prefix to each name is a unique number for each individual.
2. Names with a plus + prefix means that the name will appear again in later generations, in reference to their children.
3. Roman numeral prefix is the order of birth for siblings.
4. Small superscripted numbers indicate generational level of individuals.
5. Parenthetized names after emboldened name are forebears or bloodline of individual.
6. All years shown are estimated date of births (DOB) when prefixed by Abt (about).
7. Where full names are unknown, XXX are used.

We enjoin the clan members to make corrections/updates as may deem fit, such as filling in the correct names, DOBs, additional children and/or siblings, preferred deletions, etc. If sent back to <ferngil@aol.com>, we will update the database and reissue a new printout.

Last portion is the index which lists all the members alphabetically, and their corresponding reference number.
